LEGAL TECH FOR NON-LAWYERS: REPORT OF THE SURVEY OF US LEGAL TECHNOLOGIES

Rebecca L. Sandefur, with the assistance of Alice Chang, Taemesha Hyder, Sajid Khurram, Elizabeth Prete, Matthew Schneider, and Noah Tate.

EXECUTIVE SUMMARY

Legal technology is a rapidly developing field. It includes tools targeted at a range of different user groups, including lawyers, law firms, corporations, in-house legal departments, court systems, community organizations, and individual users who are not trained as attorneys. Some tools do legal work; others track and manage it. Still others are "under the hood," allowing developers to more easily produce legal tools.

With funding from the Open Society Foundations, the Survey of US Legal Technologies sought to identify existing digital technologies that assist with justice problems in US jurisdictions and include among their user groups non-lawyers, whether individual members of the public working on their own justice problems or non-lawyers such as social workers or community organizers working directly with the public. The main findings of the Survey are:

- Over 320 digital legal tools for nonlawyer users exist for US jurisdictions, offering assistance with a range of both criminal (*e.g.,* arrest, police stops, expungement) and civil (*e.g.,* family, housing, health, employment) justice problems.
- Just over half of tools (52%) assist the user in taking some action on a justice problem, such as producing a legal document, compiling evidence, diagnosing a legal problem, or resolving a dispute.
- Using many tools requires resources or capabilities that some groups and communities are unlikely to have. The same groups often unable to access traditional lawyer assistance – such as people with low incomes, racial minorities, and people with lower levels of education – are also less likely to be able to use digital tools.
- Many tools reflect outdated design standards, presenting long lists, long articles, and lots of text.
- Tools are both restricted and limited in the services they provide. Few offer more than one function. A large component are simply repositories of information about the law. Few tools aid users in diagnosing legal aspects of problems they experience.
- The types of justice problems served by the tools, while often important, only partly match the types of justice problems most commonly reported by Americans.
- Many tools are free to use, but a substantial minority charge the user.

CONTENTS

THE UNIVERSE OF LEGAL TECHNOLOGIES

Legal technology is a rapidly developing field, and includes tools targeted at a range of different user groups, including lawyers, law firms, corporations, in-house legal departments, court systems, community organizations, and individual users who are not trained as attorneys. Some of these tools do legal work, while others track and manage legal work, and still others are "under the hood," allowing tool developers to more easily produce legal technologies. The focus of the present project is on tools that non-lawyers may use to diagnose, understand, or take action on legal problems, whether those non-lawyers are using the tools to work on their own problems or are working to assist others with justice problems, for example in their work as staff of community organizations, courts, or social services providers.

In a field with such diffuse activity and rapid development, producing a complete and definitive list of technologies targeted at any user group is impossible: new technologies are born and die almost daily, and there is no registry of such tools. Thus, while this project's strategy for identifying the universe of such technologies was expansive, no such effort can claim to be comprehensive. The search for technologies relied on existing lists compiled for a range of different purposes, on searches in repositories where users may find such applications, and on outreach to people whose work was likely to make them aware of such tools (see Appendix A for details).

The results of this activity produced the Survey of US Legal Technologies, funded by a grant from the Open Society Foundations. The Survey reports on the state of the field as of Fall 2018.

The Survey identified 322 technologies designed for use by non-lawyers in US jurisdictions (see Appendix B for a listing). An important focus of this research project is access to justice by low-income communities and others who currently have restricted access to law and legal services. The universe of tools therefore includes the state-wide legal resource websites provided in every state and hosted by legal aid agencies, as well as a range of resources targeting low-income people and other vulnerable groups.

Analysis of the data from the Survey explored the following questions:
- What kinds of justice problems do the tools assist with?
- What kinds of specific tasks do the tools assist with?
- How do the types of justice problems and areas of law served compare with the kinds of justice problems and needs people actually have?
- What groups of users are likely to be able to use the tools?

WHAT DO THE TOOLS DO?

Digital legal tools exist in the form of websites and of applications that can be downloaded to a mobile phone or other device. They exist for many areas of law in which Americans report having justice problems. However, the services most tools offer in those areas do not match well with what is known about people's needs for assistance.

Tools come in a range of genres. One group of tools consists of legal dictionaries, applications that give access to the US constitution, or applications that compile information about the legality of some activity that differs from state to state, like possession of marijuana for recreational use or laws regulating concealed firearms or knives. Another group of tools are basically compilations of legal information targeted at a specific population, such as low-income residents of a state. Sometimes this legal information is supplemented by official legal forms for acting on some kinds of justice problems. On some websites, forms must be downloaded, printed and filled in by hand, while on others the tool facilitates the user in completing the form or other document on line and may even send the document on to its intended recipient, like a court or a service provider. Another group of tools are essentially lawyer referral services. A few tools provide extensive services for specific justice problems. These tools diagnose legal problems, compile evidence necessary for making a claim about the problem, and enable the user to act. For example, JustFix assists users in putting together a complaint to a landlord about a habitability problem in an apartment, and then sends the complaint letter. Tools offering such extensive services are rare.

AREAS OF LAW SERVED BY EXISTING TOOLS

About a fifth of tools (22%) claim to assist users with problems in any area of law. Most tools, however, specialize in one or a few areas.

Existing tools target a wide range of types of justice problems. Table 1 reports the most prevalent areas of law existing tools serve. About half of tools (51%) offer assistance with problems related to criminal justice system involvement, such as police stops, arrest, bail, and expungement. Almost a third of tools (31%) assist with matters of family law, including divorce, custody, guardianships, conservatorships, and adoption. A quarter of tools offer services for consumer problems, including buying and selling goods and services by individuals (e.g., cell phone contracts, goods bought on the internet), warranties, debt, credit and bankruptcy. About a fifth of tools (22%) help with housing issues unrelated to the transfer of real property, assisting with landlord-tenant issues such as eviction and problems with housing conditions. About a fifth of tools (23%) provide assistance with real property matters, like purchase and title search. Another

6

group of tools (22%) offers assistance with matters related to employment, like the calculation of overtime, problems with employers or interactions with unions. Another group of tools (21%) assists with legal problems related to health.

Table 1. Principal Areas of Service: All Tools

Field of Law	Tools Serving
Criminal	51%
Family	31%
Consumer (including bankruptcy)	25%
Real estate	23%
Civil Rights	23%
Employment	22%
Housing	22%
Health	21%

Notes:
N=322 technologies
Source: Survey of US Legal Technologies

Additional tools exist for a range of other areas of law, including contract, immigration, intellectual property, personal injury, and traffic.

SERVICES TOOLS PROVIDE

No existing tool is a "one stop shop" for justice problems generally. For example, there is no tool that consists of a natural language interface that diagnoses the legal aspects of a user's life situation, offers possible routes to solution, and then facilitates taking action toward a solution by compiling evidence of a complaint and creating or filing a legal document with a court or other agency. A few tools do provide a fuller range of services for a specific type of justice problem. These tools take a user from identifying a problem, to considering options, to taking action on it themselves.
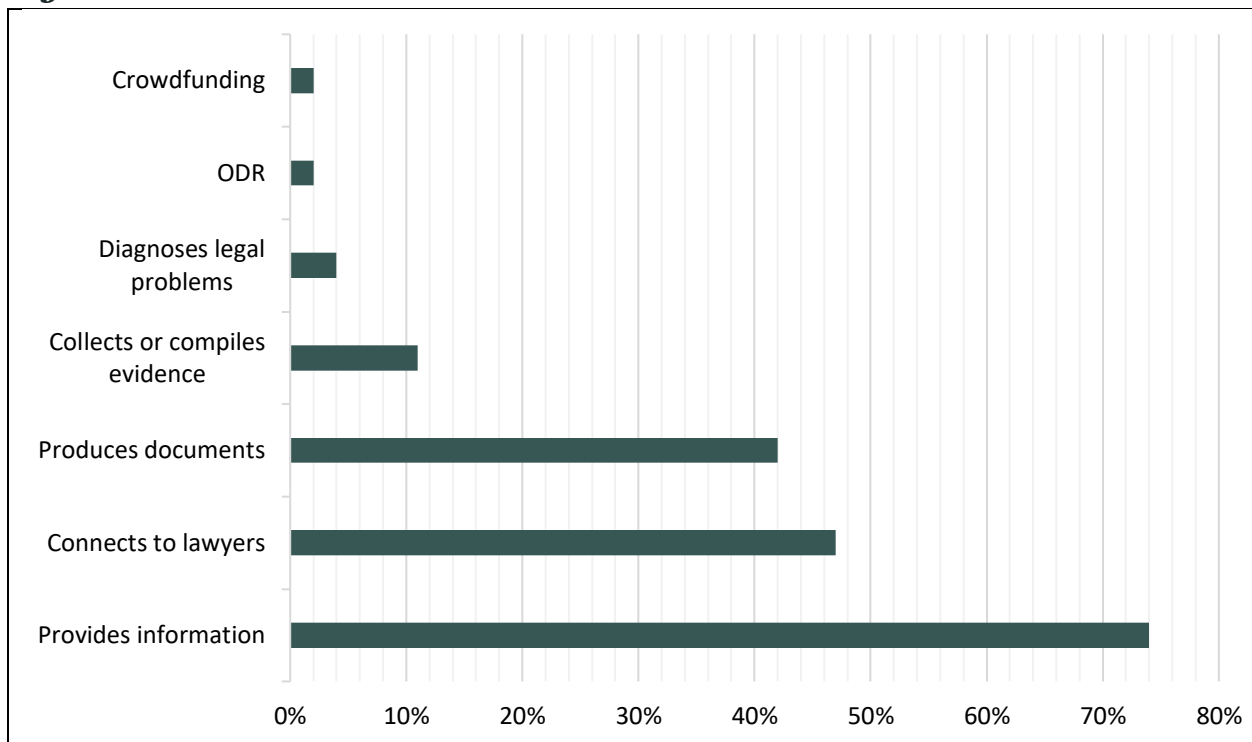

At present, most tools provide legal information or connections to lawyers, as Figure 1 shows. About three quarters of tools provide legal information of some type, and just under half connect people to attorneys. Most referrals to lawyers are "cold": that is, the

user is given a list of attorneys selected by location or professed specialty, but no information is passed along to the attorney by the tool. About 15% of tools offer "warm" referrals, where the tool passes along information about the potential client and connects the client with the attorney.

Tools that facilitate a user in taking some action typically automate one piece of working on a justice problem, like diagnosing a problem as having legal aspects, consequences or remedies (*e.g.*, "my employer is committing wage theft"); or, compiling evidence for a complaint (*e.g.,* "here are the hours I worked for which I was not paid the mandated rate"); or, producing legal documents like parenting plans or contracts.

Just over half of tools go at least one step toward empowering users to take some concrete action on their own to work on a justice problem. As Figure 1 shows, around two fifths of tools assist the user in creating documents, like powers of attorney, forms to file with courts, or letters of complaint. A handful of tools assist the user in compiling evidence, like hours worked in a case of potential wage theft or pictures of housing code violations in a habitability issue. A few tools help the user to diagnose legal problems. A few provide online dispute resolution services, and a few offer crowdfunding platforms for bail or litigation costs.

### *Figure 1. Services Tools Provide*

Notes: n=322 technologies
Source: Survey of US Legal Technologies

Among tools that facilitate user action, the most common task is the production of documents. As Figure 2 reports, 70% of tools that "do" something, create documents. A fifth of this group of tools help users compile evidence – for example, of a wage theft claim, of a housing code violation, or of abuse or neglect. The other functions are quite rare among existing tools.

Figure 2. Services Tools Provide: Tools that Facilitate User Action

n=167 technologies that facilitate user action.
Notes: A tool facilitates user action if it helps the user complete a task related to taking action on a legal problem without assistance from an attorney. This includes diagnosing legal problems, compiling evidence, creating documents, providing on-line dispute resolution, or crowdfunding legal actions.

WHAT TOOLS PROVIDE VERSUS WHAT PEOPLE WANT OR NEED

There is a substantial mismatch between the services tools offer and what is known about the assistance wanted or needed by the American public. While some tools do exist that serve the broad legal problem areas Americans most frequently encounter, the services the tools actually offer are not those that research suggests Americans want or need when they face justice problems.

Besides information and lawyer referral, the most common service offered by existing tools is the creation of documents. Tools assist people in creating many different kinds of documents, including advance directives, contracts, wills, powers of attorney, parenting plans, petitions for divorce, patent applications, answers to eviction, orders to show cause, and letters of complaint. Many Americans could certainly benefit from this assistance, but for the most part the tasks of document creation come rather late in the game in the life cycle of a justice problem – once someone has already figured out that some kind of legal problem exists on which she could take some sort of formal action. Since most Americans facing justice problems do not recognize legal aspects of their problems, existing tools are not useful for most problems.

TYPES OF ASSISTANCE AMERICANS WANT OR NEED

One of the most striking findings of recent research is that while many Americans have civil justice problems, they typically do not recognize those problems as having legal aspects or remedies (Sandefur 2014). For example, someone will realize that an elderly parent needs assistance with his financial affairs. Or, a grandparent may take in a grandchild whose parent cannot care for her. Or, an employee may be furious at an employer for not paying overtime wages for holiday and weekend hours. Many people in these situations, however, will not recognize that their care tasks for parents or grandchildren have legal aspects, and can be facilitated by legal instruments like limited powers of attorney or guardianship. And many will attribute the employer's behavior to the employer's personal flaws rather than recognizing the situation as the legally actionable problem of wage theft.

In a context where many people experience justice problems that they do not recognize as legal or remediable, tools that offer diagnosis – explaining to someone that their problem involves specific legal aspects, such as violations of housing codes or wage and hour laws – and provide options for response could be particularly valuable. There are very few such tools.

TYPES OF JUSTICE PROBLEMS AMERICANS HAVE

In the United States, most Americans are experiencing at least one civil justice problem (Legal Services Corporation 2017a; Sandefur 2016). From surveys of the American public, the kinds of problems that Americans report most commonly involve:

- Household finances
- Health and insurance

- Consumer problems
- Family and divorce
- Livelihood (employment, benefits)
- Housing

US civil justice surveys have typically not asked people about immigration problems and, because they have been focused on civil justice, have not asked about criminal justice system involvement (Consortium on Legal Services and the Public 1994; Legal Services Corporation 2017a; Sandefur 2014; see also Pleasence 2016).

Other information suggests that immigration and criminal problems may affect many millions of Americans. According to the Migration Policy Institute (2016b), immigrants of all types – documented, undocumented, naturalized, etc. – comprised 13.5% of the US population in 2016. In that same year, law enforcement authorities performed an estimated 10.7 million arrests for crimes, or about one arrest for every 30 US residents (Federal Bureau of Investigation 2016). And the US is well-known for mass incarceration, which creates a whole range of collateral consequences that can become justice problems related to expungement, legal debt, and the like (Harris 2017; Selbin, McCrary, and Epstein 2017).

Tools do exist that offer some assistance in the areas of law where Americans most commonly experience justice problems, but the services they offer for those problems are limited, focused mainly on providing legal information, referring users to attorneys, and creating different kinds of documents.

WHO IS ABLE TO USE THE TOOLS?

In order to use digital tools to learn about and take action on legal problems, people at minimum need access to specific resources and possession of specific capabilities. While many Americans do possess the basic capabilities necessary to use digital tools and have access to the necessary resources, a substantial minority do not. This substantial minority includes many members of groups that report higher rates of civil justice problems or are otherwise vulnerable, like poor people and non-Whites.

ACCESS TO THE INTERNET

To use digital tools, people need access to the internet. A majority of American adults are internet users: 89% of US adults were internet users in 2018. While there are no longer significant racial disparities in internet use, there are important differences by income and education. For example, virtually all adults (98%) earning $75,000 or more each year use the internet, while four-fifths (81%) of those earning less than $30,000 a year do so. Similarly, 65% of those with less than a high school education use the internet, in comparison with 97% of college graduates (PEW 2018).

Americans access the internet in a range of ways: through home broadband, through their cell phones, and using computers they have access to at work or in a public space like a library. How people access the internet affects their ability to use legal technologies. For example, some digital legal tools are quite data intensive, which means that people who have cell phone-only access to the internet may incur large data costs in using the tools (Rostain 2018). People with low incomes, racial minorities and people with lower levels of education are among the groups most likely to be dependent on cell phones for personal internet access, as Table 2 shows.

Table 2. Access to the Internet in the US: 2016

	Home broadband users	Smartphone dependent internet users
	73%	12%
Race		
Whites	78%	9%
Blacks	65%	15%
Hispanics	58%	35%
Education		
< high school	34%	27%
College graduate	91%	5%
Income		
< $30,000	53%	21%
$75,000 +	93%	5%
Type of community		
Urban	73%	12%
Suburban	76%	12%
Rural	63%	14%

Notes: Smartphone-dependent users are those who do not have home broadband access but own smartphones.
Source: PEW Research Center 2018.

TEXT-DEPENDENCE AND ADVANCED READING LEVELS

Most digital legal tools are text-based, in the sense that written words are the principal and often the only way in which the tool communicates with the user. Table 3 reports on the capabilities of Americans to use text-based or English-only tools. The table also reports on whether tools can be used by people who have limited English facility or cannot read text. Many tools created for US jurisdictions are offered in English only. Just over 8% of US adults have limited proficiency in English, and therefore are likely to be unable to use English-only tools. About one in seven US adults (14.5%) do not have basic literacy skills. Fully 75% of existing tools require English-language facility. Most tools are designed to be used only by people who are both sighted and literate in at least one language. Only 16% of tools provide at least some of the material offered though a means other than written text, such as a video.

Table 3. User Capabilities and Digital Legal Tool Capabilities

User capabilities		Tool capabilities	
Limited English Proficiency	8.1%	Available in languages other than English[a]	25%
Adults with below basic literacy	14.5%	Usable by people who cannot read or cannot see text[b]	16%
Adults with visual disability	2.7%		
Aged 65+	6.4%		

Notes:
[a] The most common available language is Spanish, but some tools provide multiple languages.
[b] If a tool provided videos or audio for some material, it was coded as usable by this standard.
Sources: Migration Policy Institute 2016a; National Center for Education Statistics 2003; National Federation of the Blind 2017; Survey of US Legal Technologies.

Populations with restricted access to justice through traditional routes – those with lower incomes and less education – are also less likely to be able to use existing digital tools effectively, as these groups have average lower levels of English literacy. Tools designed specifically for low-income populations are as likely to be text-based as tools

designed for groups more likely to have higher levels of literacy. Tools designed for low-income communities often present information in long articles that are written at reading levels too advanced for intended users (Dyson and Schellenberg 2017; Legal Services Corporation 2017b).

Thus, people who are vision impaired, have low literacy, or are not proficient in English are poorly served by most existing tools.

FREE, FREEMIUM AND FEE-FOR-SERVICE

Many tools offer their services for free to users, while others offer some free services and then charge a fee for more extensive service, and some tools cannot be used without the user paying a fee. Roughly three quarters of existing tools are free to users.

BARRIERS AND OPPORTUNITIES

The Survey of US Legal Technologies reveals that the modal digital tool targeting nonlawyer users provides limited services: typically information about the law or a referral or connection to an attorney. The modal tool does little to facilitate a nonlawyer in taking any independent action on a justice problem. Many tools that offer free service are not usable by many people in low-income communities, because of limited internet access or barriers of language or literacy. While some of these limitations reflect current limitations in technology, the main engine of restriction is human actions and choices.

WHY DON'T TOOLS CORRESPOND MORE CLOSELY TO PEOPLE'S KNOWN NEEDS AND CAPABILITIES?

The services offered by existing legal digital tools and those that research suggests people want and need are poorly matched. Among the reasons for this, three stand out: the ecology of tool creation, outdated design processes, and the resource-strapped environment of tool development in the nonprofit sector.

No organization or market currently coordinates tool development. A wide range of different kinds of actors are working to develop digital legal tools: for-profit companies, startups, nonprofit organizations, and private individuals who create tools and offer them to the public through app stores like Google Play or iTunes. In the

United States, the creation and distribution of many services is coordinated substantially by markets for those services, where demand and competition are important factors. Most tools are not participating in a fee-for-service market, so consumer demand has less impact and tool creators are guided by other ideas about what tools the public may want.

Development of digital tools is usually provider-driven, reflecting the interests and beliefs of those offering the service, rather than the wants and needs of the intended user populations. Established techniques exist for creating tools through user-centered, user-driven, and collaborative design. However, with a few notable exceptions, these techniques have not often been used in the development of existing tools (Hagan 2018).

Matching tools to client needs requires knowledge of those needs and the capacity to adapt existing tools or create new ones that connect closely with those needs. Most of the nonprofit service providers working with low income populations do not have access to the resources of time, money and expertise necessary either to conduct a rigorous needs assessment for their service populations or to create or customize digital tools. Rather, they must use available products "off the shelf," adapting them as they are able based on their understanding of what people might find useful.

Starting with the needs and perspectives of potential users of new tools would be the first step in creating a body of technologies that are more closely aligned with the justice problems Americans actually have and the kinds of assistance they want or need with those problems. A few tools have been developed in this way; more should be.

WHY DON'T TOOLS "DO" MORE?

Many existing tools may be conduits of information, but only about half assist their users in taking any kind of action on justice problems by automating one or more tasks. In part, the limited utility of many existing tools reflects the fact that most are not currently designed in close consultation with intended user groups. However, there are two other important factors that limit what existing digital legal tools can do: the legal profession's robust monopoly on the provision of legal advice and the challenges of coordination in contemporary state court systems. Thus, a central responsibility for this situation rests with the justice system itself.

One of the most common tasks automated by existing tools is the creation of legal forms. Many working in this field look forward to a day when tools create forms accepted by courts and file them with the appropriate forum immediately upon

completion. While this is beginning to happen, implementing standardized forms and getting courts to accept them is a herculean task of coordination that requires every court in every county in a state accept a new way of doing its work. Even when rules change formally, clerks, judges and other courthouse staff can persist in older patterns, refusing to recognize documents that are officially approved by the court system. The barriers here are not technological, but human.

A key reason for the limitations in what available tools provide is the current regulatory regime for legal services in the United States, which limits most assistance with legal problems to services provided by licensed attorneys (Rhode and Ricca 2013). In particular, unlike in other jurisdictions (for example, the United Kingdom), non-lawyers in the United States are usually prohibited from offering legal advice. Non-lawyers engaged in providing services that look like legal advice are at risk of the legal profession's action against the unauthorized practice of law. As a way of avoiding this risk, most US tools stay in the realm of "legal information," general, publicly available information about the law and people's rights. Most tools do not offer diagnosis of the legal aspects of people's problems, suggest possible routes of action, or provide other services that would help move a problem toward resolution.

A growing evidence base suggests that non-lawyers can provide effective services for some kinds of justice problems without risk to consumer protection (see, *e.g.,* Rhode and Ricca 2013; Sandefur and Clarke 2018). This evidence base can help guide sensible revisions to the rules about unauthorized practice that would permit the expansion of what both human non-lawyers and digital tools can provide. At present, what is missing is the will to tackle these revisions.

CONCLUSION

Digital legal technologies hold promise to empower individuals and communities to identify, understand, and take action on their justice problems and to use the rights that are theirs under law. At this stage in the growth of this field of activity, realizing that promise is not a technological challenge, but rather a social one.

ACKNOWLEDGEMENTS

APPENDIX A. METHODS

SCOPE OF INTEREST

The focus of the present project is on digital tools that non-lawyers may use to diagnose, understand or take action on legal problems, whether those non-lawyers are using the tools to work on their own problems or are working to assist others with justice problems, for example in their work as staff of community organizations, courts, or social services providers. The project investigates tools for use in US jurisdictions.

FINDING EXISTING TOOLS

There is no registry of such tools. While this project's strategy for identifying the universe of such technologies was expansive, no such effort can claim to be comprehensive. The search for technologies relied on existing lists compiled for a range of different purposes, on searches in repositories where users may find such applications, and on outreach to people whose work was likely to make them aware of such tools.

Lists. We consulted three lists of legal technologies, two focusing on tools with a market connection and the other focusing on access to justice tools and therefore likely to include tools being developed and used by nonprofit organizations of different types. The list of access to justice tools came from a project funded by the Canadian Social Sciences and Humanities Research Council. In this project, researchers attempted to identify existing tools by searching mobile app stores and the internet via Google. The research team of the Canadian project was interested particularly in Canadian tools, but did discover a number of tools designed for US jurisdictions and published a list of these in an appendix to their report (McGill *et al.* 2016). Another list of tools was that of "Legal Tech Startups" presented on AngelList, an online platform where legal technology startups can post profiles to attract employees, investors, and users (AngelList 2018). A third list came from Robert Ambrogi's *LawSites* blog, which publishes a continuously updated list of legal technology startups that draws on a range of sources for data, including readers of the blog (Ambrogi 2016, 2018).

Searches. In addition to consulting established lists, we conducted our own search for legal technologies. One search strategy was outreach to program funders and practitioners in the United States civil justice arena. The other strategy involved searching two major repositories of user-facing applications of many types, the Google Play Store and the iTunes app store, using the search terms "law," "legal," and "rights."

After combining the lists from each source and eliminating duplicates, we identified just over 600 unique legal technologies designed for use in one or more US jurisdictions. Many of these tools were targeted at law firms, lawyers, or business organizations.

Inspecting each technology, we identified 322 that included people without legal training among their user groups, whether individual members of the public or nonlawyer professionals such as social workers or community organizers working directly with the public. These 322 technologies, listed in Appendix B, comprise our universe of user-facing legal technologies designed for use by nonlawyer members of the public. While no list of this type can be exhaustive, given the rapidity of change and the diffuse nature of the activity, it is wide-ranging, and includes both for-profit and not-for-profit products.

Each technology was coded on a range of characteristics, including the areas of law it served, specific services it provided, and its accessibility to different groups in the population, such as people who are visually impaired or have limited proficiency in English.

1. ABA Free Legal Answers	ABA Free Legal Answers is a virtual legal advice clinic. Qualifying users post their civil legal question to their state's website. Users will then be emailed when their question receives a response. Attorney volunteers, who must be authorized to provide pro bono assistance in their state, log in to the website, select questions to answer, and provide legal information and advice. Volunteer attorneys will not answer criminal law questions. (https://abafreelegalanswers.org/)
2. Access Family Law	Guides parties through a three-step process to fill and file divorce documents. (https://www.accessfamilylaw.com)
3. ACLU Blue	Allows users to record law enforcement, share those recordings in a public forum, and participate in an ongoing #ACLUBlue Twitter conversation about police reform. Includes Know Your Rights information on what to do when you're stopped by law enforcement, on filming police, and on protesting - as well as your rights in the Texas-Mexico border zone. (https://www.aclutx.org/en/campaigns/aclu-blue)
4. After I Go	Assists loved ones locate documents, key account numbers, insurance information,

develop wills, and general steps following someone's death. (https://www.crunchbase.com/organization/after-i-go#section-overview)

5. AfterSteps

AfterSteps is an all-in-one end-of-life planning service. AfterSteps simplifies the end-of-life planning process by guiding users step-by-step through the estate, financial, funeral, and legacy planning that make up a complete plan. AfterSteps stores your plan and related documents, and then transfers them to your designated beneficiaries upon passing. (http://www.aftersteps.com/)

6. AI Patents

"Simply, a user inputs an inventive concept using free-form, natural language. The engine internally supplements the query with related technical terminology learned from thousands of patent examiner reports. Then, the user is presented with a ranked list of highly relevant documents. This same end user does not need to be an expert, professional patent searcher to use and derive value from our system." (https://www.crunchbase.com/organization/ai-patents#/entity)

7. Air Help

This mobile app lets users know about their rights when their flight has been cancelled, overbooked or delayed, and then assists them in producing the necessary documents to be compensated. (https://www.airhelp.com/en/mobile/). (https://itunes.apple.com/us/app/airhelp/id698136946?mt=8). (https://play.google.com/store/apps/details?i

It is available in the iTunes marketplace. (https://itunes.apple.com/app/id338178992?mt=8&ign-mpt=uo%3D4&_branch_match_id=536857813297199602)
128.	LawTake	Users can browse through legal issues and watch free, informative videos to help them

resolve their legal problem. They can then purchase more in-depth videos to aid them with resolution.
(https://www.lawtake.com/index.php/)

129.	Lawyer.com	US Lawyer Matching Service & Top Lawyer Directory, providing attorneys with legal marketing services and connecting users with assistance. (https://www.lawyer.com/)
130.	LawyerMatch	"LawyerMatch will connect you to an attorney that specializes in your needs, quickly and for free. We do the hard work, let the lawyers come to you. For lawyers, LawyerMatch offers a stream of qualified leads for new clients while filtering out any which do not match your specialties and interests." (https://www.crunchbase.com/organization/lawyermatch#/entity)
131.	LawyerUp	Connects users who have pre-downloaded the mobile app with local lawyers in 15 minutes or less. After opening the app the user inputs the offence they are charged with, and the operator will confirm the users identity, record geolocation, number and immediately dispatch a lawyer to tend to the matter. By example, the lawyer will immediate arrange for a bondsman. All services are not to exceed one billable hour. (https://lawyerupnow.com/)
132.	LawZam	Creates a "platform for free legal consultations by videoconference". "This makes the process of finding a lawyer easy as

the app has a selection of attorneys registered with the service. These attorneys do not charge fees for initial consultations and no obligations are tied to users who have a free consultation. LawZam does not deal with the financial transactions between users and registered attorneys. It is merely a platform for communication."
(https://www.lawzam.com)

133.	Learn Our Rights	"Learn Our Rights is committed to giving people a free and accessible platform to educate themselves about their rights. We use smart search technology to help users articulate their problem in context and then produce "plain English" translations of the statutes relevant to their problem through artificial intelligence.
		In addition to serving as an educational tool, Learn Our Rights also is a matching network for users (consumers) and attorneys. Learn Our Rights sells advertising space to a select group of pre-vetted attorneys with expertise in the topics covered on the platform. The attorneys can thus effectively run highly targeted advertisements to a small group of individuals who all need a service they provide, and individuals can easily find an attorney who they can trust to solve their problem."
		(https://www.f6s.com/learnourrights).
134.	Legal and Law Terms	Legal dictionary app made for lawyers and law students that includes legal and law definitions, notes, and cross references. (https://play.google.com/store/apps/details?id=com.indierevo.legallaw)

with a native voice, and other common questions for photographers." The app is available in the iTunes app store. ([https://itunes.apple.com/us/app/photograp hers-rights/id458324345?mt=8](https://itunes.apple.com/us/app/photographers-rights/id458324345?mt=8))

204.	PlainSite	Provides "non-lawyers easy to navigate access to the entire American legal system with access to public records from agencies, patent applications, corporate profiles and public federal and state case dockets. Non-public analytic data is also available." Features include "the ability to search for cases by case title, an enhanced view of each cases' docket, statistics on law firms' and lawyer's historical activity, an attorney finder based on past caseloads, and a Motion Sensor (which allows the user to see how a given judge or lawyer has behaved with regard to certain kinds of motions in the past)." (http://www.plainsite.org)

205.	Pocket DACA	Provides a "self-screening tool for Deferred Action for Childhood Arrivals (DACA) applicants to understand their eligibility for the status, and a searchable directory of listings for immigration legal services providers, including non-profit groups, throughout the States. It also includes links to news about the deferred action process and FAQs." ([https://www.probono.net/mobileinitiatives/i tem.4891-Pocket_DACA](https://www.probono.net/mobileinitiatives/item.4891-Pocket_DACA)) App available in Google Play and iTunes app stores.

206.	Press Agreement	"No need for notary…. Just a Press of a Finger. Coming Soon!" (https://www.pressagreement.com/)
207.	Proboknow	"Proboknow's primary mission is to help low income Americans gain access to legal representation they otherwise couldn't afford. We accomplish this is by connecting them with new attorneys in need of experience, and connecting the new attorneys with experienced mentors to help guide them through pro bono cases. Clients get the legal help they need, without having to navigate the labyrinth of overburdened legal services organizations. New attorneys pinpoint exactly the sorts of pro bono cases that fit their career aspirations and experiential goals, while gaining an appreciation for pro bono work at an early stage in their careers. Mentors double the impact of their pro bono work - by not only ensuring quality representation but also much-needed training for newer attorneys." (https://proboknow.com/)
208.	Protection of Human Rights Act, 1993	Google Play app that gives users access to the Protection of Human Rights Act, 1993. (https://play.google.com/store/apps/details?id=com.simplysocial.legal.protectionofhumanrights&hl=en_US&rdid=com.simplysocial.legal.protectionofhumanrights)
209.	PWT Legal Terms	Dictionary of commonly used legal terms. Available in the Google Play app store.
210.	Quickly Legal –	Allows freelancers, startups, and small business owners to create contracts. Contracts

	Contracts	can be signed electronically through the app and are stored in the cloud. The app is also available in the iTunes and Google Play app stores. (https://www.quicklylegal.com/how-it-works)
211.	Real Estate Dictionary	Provides users with clear and in-depth information of mortgages, property law, down payments, taxes, property types, and commissions. This app was made for realtors, investors, builders, homeowners, and anyone buying or selling a property. The app is available on the iTunes app store. (https://itunes.apple.com/us/app/real-estate-dictionary-financial-and-legal-terms/id1021592453?mt=8)
212.	Rights Finder	Assists users in finding out if someone has "ripped off" their writing or trademarks. Sets up searchers to find your works online, schedules searches to recur automatically. The app is available in the iTunes app store. (https://itunes.apple.com/us/app/rights-finder/id598504995?mt=8)
213.	Risk Detector	"The Legal Risk Detector app is designed for use on tablets, laptops and mobile devices. The Risk Detector covers financial exploitation, consumer, housing and health care matters, and is designed to more comprehensively reach and serve a population that is vulnerable to various forms of elder abuse, but difficult to serve through traditional legal services. Users can choose from "Standard" or "Express" screenings based on the time available during their home

visit or other factors, and to capture additional notes about vulnerabilities, for example if the client received a verbal but not written notice of eviction, or if the social worker observed repairs needed in the household. The Risk Detector provides the advocate with an assessment report that categorizes the client's risk as "low," "medium" and "high," identifies red flag issues, and automatically emails a report to Center for Elder Law & Justice for follow-up and appropriate action."

214.	Road to Status	"Complete your immigration application process through our fast, simple "do-it-yourself" software. Optional lawyer review services are also available to help assure the proper completion of your application." (https://www.roadtostatus.com/)
215.	Rocket Lawyer	Users can produce legal documents, get legal advice from an On-Call attorney. (https://www.rocketlawyer.com/)
216.	ROSS Intelligence	"Siri for the law. We provide cited answers to natural language legal questions." (https://rossintelligence.com/)
217.	RSVPlaw	"RSVP Law curates legal information to help you find it easier. We have built this platform to update constantly by curating information for all areas of law in a way that is more contextual and designed in a Q&A fashion."

"A legal encyclopedia for the 21st century."
(https://angel.co/rsvp-law)

218.	Rulebook App for Lawyers	Mobile law library app. Users can access court rules, the US Constitution, and legal definitions. Has a bookmarking feature and lets users highlight important entries. Available on iTunes marketplace. (https://itunes.apple.com/us/app/rulebook/id454619081?mt=8)
219.	Sanza	Connects potential immigrants with immigration experts for one-hour free consultations in California. (https://www.crunchbase.com/organization/sanza#section-overview)
220.	Separate.Us	"Separate.us makes it easier for people to get through one of the most traumatic life events, a divorce, by allowing them to fill out their forms online and provides referrals to attorneys, therapists, etc. at a discounted rate." (https://www.separate.us)
221.	Shake	Enables users to produce legal agreements online. The app guides users with questionnaires to produce the specific terms of their legal documents, and allows them to send, share and sign in-app. (http://www.shakelaw.com/)
222.	Shop Immigration	"Innovative market network for immigration services that's making online legal hiring -

safe." (www.shopimmigration.com)

223.	Shortsaleopedia	"Shortsaleopedia is a Q&A site for questions related to short sales that serves as a resource for homeowners investigating a short sale. The website has signed referral agreements with local short sale agents and brokers in every major market in the United States. Shortsaleopedia sets arrangements with professionals that have advanced degrees, such as, a Juris Doctorate, Master's Degrees, CPA, CRS, or CDPE." (https://www.crunchbase.com/organization/shortsaleopedia#/entity)
224.	SimpleCitizen	SimpleCitizen is an online do-it-yourself tool for immigrants who need to file for a green card or other basic immigration documentation. SimpleCitizen helps those filing attain the same confidence and reassurance in their application without being forced to pay the high premiums associated with legal counsel. The software is designed to help anyone complete his or her immigration application quickly and correctly. (https://simplecitizen.com/)
225.	SmartLegalForms	"SmartLegalForms, Inc., is a legal information services company that provides automated legal forms, expert legal advisors, and other digital tools that enable consumers and small business to solve their legal issues and problems at very low cost. We have providing digital legal solutions to more than 500,000 satisfied consumers since 1998." (https://www.crunchbase.com/organization/

smartlegalforms#/entity)
(https://www.smartlegalforms.com/)

226.	SoftLAW	"If you're a law student, a lawyer, a law professor or even a common citizen, these regulations need to be in your knowledge to keep you prepared for international changes. They also set codes of conduct and standards for the people to follow. Although soft laws are not binding, they have every chance to be converted to 'hard laws' or laws that are legally binding on citizens of a prescribed area, or people all around the world... We at Softlaw want you to learn and grow, discuss and debate as well as to own the legal field while you carry out talks and contemplations." (http://www.softlaw.co/).
227.	State Decoded	"Online platform that displays and interprets codes, laws, legislation and court decisions by state to make them more understandable by regular people". "The State Decoded API allows developers to access and integrate the data and functionality of the app with others and to create new applications." (http://www.statedecoded.com)
228.	Stateside Legal	"Legal help for military members, veterans, and their families." (https://statesidelegal.org/)
229- 283.	State-wide legal aid websites	Provide general information about legal problems (e.g. family, housing, labor laws, etc.), link users to local civil legal aid or pro

bono attorneys or community organizations. Some include live-chat functions. Each state and U.S. territory has its own website, with varying features and formats.

| 284. | Statutes and Case Law Library | "Statutes and Case Law Library is a cost-effective, mobile alternative to expensive legal resources like LexisNexis, Westlaw, Fastcase, and antiquated legal statutes and case law desk books. With PushLegal's simple point-and-click navigation, you can quickly find the specific rule or statute you're looking for, and PushLegal will show you the leading case law associated with that specific rule or statute." |

The app is available in the Google Play app store. (https://play.google.com/store/apps/details?id=com.nacdl.library)

285. Stop & Frisk Watch

Provides users with the ability for bystanders and accused persons to fully document stop and frisk encounters. Allows users to film, record, and report police misconduct with a survey, that is then immediately sent the NYCLU to oversee the NYPD conduct. The app also includes a "know your rights" section "that instructs people about their rights when confronted by police and their right to film police activity in public." Available in English and Spanish (http://www.nyclu.org/app)

286. StopaStalker

Allows users "to empower themselves to stop being victims and take action against stalkers". "Users can collect information, collate it and report to authorities in a simple app made for victims of stalking. Made in conjunction with leading criminologists and victims support forums, the app allows users to document time, location and number of incidents, etc." Available in the iTunes app store. (https://itunes.apple.com/us/app/stopastalker/id645238415?mt=8)

287. STOPit

Reporting software for a range of different types of problems, particularly for inappropriate behavior, safety, or crimes. The app "provides valuable services to administrators including monitoring their incidents, content about issues and

resolutions, training and promotion services, and investigation tools to help get in front of issues and manage risks." Available in the iTunes and Google Play app stores. (http://stopitsolutions.com/) (https://play.google.com/store/apps/details?id=com.stopitcyberbully.mobile&hl=en&pcampaignid=MKT-Other-global-all-co-prtnr-py-PartBadge-Mar2515-1) (https://itunes.apple.com/us/app/stop!t/id719179764?mt=8)

288. SupportHound

SupportHound is a spousal support calculator that uses real cases to calculate how much and how long a spousal support award should be. (Only for Oregon.) (https://supporthound.com/)

289. TalksOnLaw

"TOL is on a mission to help everyone better understand the law. Since laws govern our lives, we think everyone should understand them. Cue TalksOnLaw - we're your sanctuary of legal wisdom. New laws are minted every day and new issues arise all the time, and we'll do our best to explain them in a clear, enjoyable way." (https://www.talksonlaw.com/)

290. Tapdox

Users can execute contracts online using e-signatures. (https://tapdox.com/)

291. Texas Legal Code: Law Search

This is a helpful resource for any person who would like to reference Texas law. It allows the user to browse the code based on area of

law, chapter, or section, and to search based on keywords. Available on Google Play store. (https://play.google.com/store/apps/details?id=com.blocshop.coonley)

292.	The Constitution of USA	Constitution App (https://itunes.apple.com/us/app/constitution-of-the-u-s-a/id378120928?mt=8)
293.	The People's Law Library of Maryland	Informs pro se litigants about their legal problems by providing "information about the law, including summaries of the law, links to primary and secondary legal sources and referrals for legal services" among a wide range of legal fields. (https://www.peoples-law.org/)
294.	The U.S. Bill of Rights	Gives users access to the U.S. Bill of Rights. Available in Google Play app store. (https://play.google.com/store/apps/details?id=com.jeffdarnell.billofrights)
295.	TinyTerms	"TinyTerms is a modular system that lets you build beautiful, simple legal documents. We ask you questions and generate the legal documents you need. Our goal is to give everyone – entrepreneurs, independent contractors, small businesses, early-stage startups – access to top-notch legal help." (https://angel.co/tinyterms/jobs)
296.	Tomorrow	The First Trust Fund for Everyone "helps you create a legal will for free, set up a living trust,

and buy just the right amount of term life insurance." Available in iTunes and Google Play app store.

(https://play.google.com/store/apps/details?id=com.andromo.dev8656.app653568)

299.   UN Human Rights

Users can learn more about their rights and how to claim them, receive updates on human

rights around the world, and make donations to support victims of human rights violations. Available in Google Play app store. (https://play.google.com/store/apps/details?id=com.ezest.smart.unhr)

300. Upsolve

"Our technology guides users through the Chapter 7 bankruptcy process and assembles the official bankruptcy forms, which only need a light-touch attorney review before filing pro se. Our product will be distributed through legal aid organizations and is free for users. By leveraging technology, Upsolve cuts the attorney time to file from 6 hours to 1.5 hours. We will allow legal aid organizations to multiply the number of clients they are able to provide a fresh start. Our minimum viable product has already helped 35 New Yorkers get a fresh start, successfully discharging over $1.5 million in debt. This has allowed our users to work without fear of wage garnishment, live without constant harassment from creditors, improve their credit scores, and improve employment and housing opportunities." (https://upsolve.org/)

301. US Constitution – usconstitution.net

Complete version of the US constitution. Includes the complete text, in-depth analysis and history and special easy-to-understand versions and interpretations for children and young adults. The app is available on the iTunes app store. (https://itunes.apple.com/us/app/u-s-constitution-usconstitution-net/id955654840?mt=8)

302.	US Constitution Annotated	Constitution App available in the iTunes marketplace. (https://itunes.apple.com/us/app/u-s-constitution-annotated/id692260032?mt=8)
303.	US Constitution Bill of Rights	Constitution App available in the Google Play app store. (https://play.google.com/store/apps/details?id=my.abcdefinder.us.constitution.and.the.bill.of.rights)

Provides users with information on town hall meetings, current legislation, and contact info for all local, state, and national representatives. The app is available in the iTunes app store. (https://itunes.apple.com/us/app/wegov/id1177782747?mt=8)
315.	Weingarten Rights eCard	Gives users access to standardized wording when invoking their Weingarten Rights. It is available in the Google Play app store. (https://play.google.com/store/apps/details?id=com.staleydigital.apps.android.weingarten)
316.	Wevorce	Uses "mediation and technology to make divorce less adversarial and costly". The app automates the more common steps of the divorce process to that the "Wevorce lawyers can focus on the unique aspects of the divorce". Website includes a "divorce calculator" and a "Child Support Calculator." (https://www.wevorce.com)
317.	Willing	Enables user to generate free wills, as well as providing general legal information on estate planning, probate, and wills. (https://willing.com/)
318.	Women's Human Rights	Provides information regarding women's human rights. Compiles documents and key terms used by UN bodies regarding women's

human rights. Available in the Google Play app store. (https://play.google.com/store/apps/details?id=com.lucid.whr)

319. Youth Link—car buying app

"Youth Link is a car buying tool for first-time buyers, provided by Iowa Legal Aid." Walks you through the confusing process of planning, budgeting and researching vehicles, emphasizing areas of the law that you might now about. Defines difficult terminology, provides checklists of documents to obtain and questions to ask when deciding which vehicle is right for you. Available in Google Play app store. (https://play.google.com/store/apps/details?id=edu.unomaha.ist.your_rights)

320. ZeekBeek

Directory of registered attorneys organized by practice area, location and availability. (https://www.zeekbeek.com/)

321. Zephyr Legal Services

"Right now, it's way too hard to fill out uncontested divorce forms in Massachusetts. The court provides fillable PDFs that don't store information unless you're using Acrobat Professional. The tools available to attorneys are all Windows-based and rely on macros, so they can't be shared with clients. The forms often end up being filled out by hand, making it cumbersome to fix errors or make changes as a case progresses. ZLS created Zephyr Forms to fix all those problems. Zephyr Forms provides an intuitive online interface for filling in all the required data, and lets users download PDFs of the forms at the click of a

button. Users can invite each other to collaborate by email, so an attorney could collaborate with a client, a client could collaborate with a financial advisor, etc. All of this comes with a simple pricing model that kicks in when the user is ready to download the PDFs." (https://angel.co/zephyr-legal-services-1)

322. ZipCourt

"ZipCourt is an online courtroom with an elegant, clean design and can handle a range of disputes." (https://www.crunchbase.com/organization/zipcourt#section-overview)
